

Note: You have four choices for each objective type question as A, B, C and D. The choice which you think is correct, fill that circle in front of that question number with marker or pen. Cutting or filling two or more circles will result in zero mark in that question.

- Reaction between Fat and NaOH is called as:
 - esterification
 - hydrogenolysis
 - fermentation
 - spontification
- Coagulant used for purification of potable water is :
 - $NiSO_4$
 - $BaSO_4$
 - $CuSO_4$
 - Alum
- Which one is not a calcareous material?
 - lime
 - clay
 - marble
 - marine shell
- Hydrolysis of Fats occur by enzyme.
 - Urease
 - maltase
 - Zymase
 - Lipase
- Acetamide is prepared by :
 - heating of CH_3COONH_4
 - heating of CH_3CN
 - heating of $CH_3COOC_2H_5$
 - hydrolysis of CH_3CN
- Which one has the highest boiling point?
 - Methanal
 - propanal
 - Ethanal
 - 2-Hexanone
- Methyl alcohol is not used as
 - solvent
 - antifreezing agent
 - substitute of petrol
 - denaturation of alcohol
- The most reactive compound is :
 - Benzene
 - Ethene
 - Ethane
 - Ethyne
- Which one is not a nucleophile?
 - H_2O
 - H_2S
 - BF_3
 - NH_3
- Conversion of unsaturated hydro carbons to saturated hydrocarbons in the presence of catalyst is called as:
 - halogenation
 - hydrogenation
 - hydroxylation
 - dehydrogenation
- Both CH_3COOH and $HCOOCH_3$ show isomerism
 - position
 - chain
 - geometric
 - functional group
- Formula of Haematite is
 - FeS_2
 - Fe_2O_3
 - $FeCO_3$
 - Fe_3O_4
- Weakest acidic solution will be of
 - HF
 - HBr
 - HI
 - HCl
- Catalyst used in contact process is
 - NO/NO_2
 - Fe_2O_3
 - SO_3
 - V_2O_5
- Chief ore of aluminium is
 - Na_3AlF_6
 - $Al_2O_3 \cdot 2H_2O$
 - Al_2O_3
 - $Al_2O_3 \cdot H_2O$
- Compound obtained when Na burns in excess of air
 - NaO_2
 - Na_2O_2
 - Na_2O
 - Na_2O_3
- Mark the correct statement.
 - Na^+ is smaller than Na - atom
 - Na^+ is larger than Na - atom
 - Cl^- is smaller than Cl - atom
 - Cl^- and Cl - atom are equal in size

SUBJECTIVE

Note:- Section I is compulsory. Attempt any 3 questions from Section II.

(Section - I)

2. Write short answers to any Eight parts. (8 x 2 = 16)
- Lanthanide contraction controls the size of elements of 6th and 7th periods. Explain the statement.
 - Give reason for order of hydration energies $Al^{3+} > Mg^{2+} > Na^+$
 - How lime mortar is prepared from lime? Explain chemical equations.
 - What is chemical garden?
 - How does weathering of potassium feldspar occur? Explain with the help of chemical equation.
 - Give chemical formula of soapstone and its two uses.
 - Complete and balance the given chemical equations. (a) $H_2S + NO \rightarrow$ (b) $HNO_3 + HN_3 \rightarrow$
 - Give two examples to prove NO_2 as a strong oxidizing agent.
 - How is orthophosphoric acid converted to metaphosphoric acid? Give complete chemical reaction.
 - Name various steps involved in the manufacturing of Portland cement by wet process.
 - Write four essential qualities of a good fertilizer.
 - Describe role of chlorofluorocarbons (CFC s) in removing ozone in stratosphere by mean of chemical reactions.
3. Write short answers to any Eight parts. (8 x 2 = 16)
- Why is there no free rotation about a double bond but a free rotation about a single bond?
 - What is mustard gas? How it is produced?
 - Write structural formulas of the following compounds:
(i) 3-methyl -1 - pentene - 4 - yne (ii) But -1-en - 3 - yne
 - Describe X-ray structure of Benzene.
 - What are mono cyclic aromatic hydrocarbons? Give two examples.
 - What is a Nucleophilic substitution reaction? Give example.
 - Why $SOCl_2$ is the best reagent to get alkyl halides from alcohols? Explain with reaction.
 - Define fermentation. Write essential conditions for fermentation.
 - Write structural formulas of the given compounds:- (i) Tartaric acid (b) Lactic acid
 - What is Ninhydrin test? Give its use.
 - What are essential and non essential amino acids?
 - What is a peptide bond? Write formula of a dipeptide.
4. Write short answers to any Six parts. (6 x 2 = 12)
- Why iodine has metallic luster?
 - What are Freon's and Teflon's?
 - The bleaching action of bleaching powder is due to its oxidative character, justify it.
 - Damaged tin plated iron gets rusted quickly, give reason.
 - Write chemistry of silver mirror test.
 - Write reaction for the conversion of methanol to ethanol.
 - Make difference between fat and oil.
 - Write importance of DNA.
 - What is iodine number?

Section-II

Note:- Attempt any three (3) questions:

(3 x 8=24)

- (a) Write any two similarities and two differences between hydrogen and halogens. 4
(b) Describe with diagram the manufacture of sodium by Down's cell. 4
- (a) Give any two methods for the preparation of potassium chromate? 4
(b) Explain the process of incineration of industrial waste. 4
- (a) What are homocyclic and heterocyclic compounds? Give suitable examples in each case. 4
(b) Discuss how X- Rays studies confirmed hexagonal structure for benzene. Also discuss objections to Kekule's structure. 4
- (a) Write a note on halogenations of alkanes by explaining all the steps involved. 4
(b) Explain following properties with reference to phenol. (i) Esterification (ii) Sulphonation 4
- (a) What products are formed when the following compounds are treated with ethylmagnesium bromide, followed by hydrolysis in the presence of acid? 4
(i) CH_3CHO (ii) CO_2 (iii) $(CH_3)_2CO$ (iv) $CICN$
(b) Explain the mechanism of the reaction of phenylhydrazine with acetone. 4
