11th CLASS - 12021

PHYSICS GROUP: FIRST OGK-GI-21 OBJECTIVE

TIME: 20 MINUTES

MARKS: 17

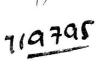

NOTE: You have four choices for each objective type question as A, B, C and D. The choice which you think is correct, fill that circle in front of that question number. Use marker or pen to fill the circles. Cutting or filling two or more circles will result in zero mark in that question.

		the circles. Cutting or filling two or more circles will result in zero mark in that question.
Q		TION NO. 1
	1	Acceleration of a pendulum of length $\ell=1$ m and displacement of 5 cm having S.H.M is
		(A) 0.29 m/s^2 (B) 0.19 m/s^2 (C) 0.69 m/s^2 (D) 0.49 m/s^2
	2	If radius of droplet becomes half then its terminal velocity will be
		(A) One fourth (B) Four times (C) Half (D) Double
	3	When both ends of organ pipe are open then the frequency of stationary waves of nth
		harmonic is given by
		(A) $\operatorname{fn} = \frac{\operatorname{nv}}{4\ell}$ (B) $\operatorname{fn} = \frac{\operatorname{v}}{2\operatorname{n}\ell}$ (C) $\operatorname{fn} = \frac{\operatorname{nv}}{2\ell}$ (D) $\operatorname{fn} = \frac{2\operatorname{v}}{\operatorname{n}\ell}$
	4	The value of constant γ for the mono-atomic gas is
		(A) 1.67 (B) 1.40 (C) 1.29 (D) 2.45
	5	In youngs double slit experiment the position of bright fringe is given by
		(A) $y = \frac{m\lambda d}{L}$ (B) $y = \frac{mLd}{\lambda}$ (C) $y = \frac{m\lambda}{Ld}$ (D) $y = \frac{m\lambda L}{d}$
	6	In Michelson method time taken by the rotational mirror to rotate through an angle $\frac{2\pi}{8}$
		(If f is the frequency of rotation) is
		(A) $\frac{1}{4f}$ (B) $\frac{1}{2f}$ (C) $\frac{1}{8f}$ (D) $\frac{1}{6f}$
	7	Sadi Carnot described an ideal engine in
		(A) 1640 (B) 1740 (C) 1940 (D) 1840
	8	A system does 600 J of work and at the same time internal energy increases by 320 J, The heat
		supplied is
		(A) 200 J (B) 600 J (C) 280 J (D) 920 J
	9	The dimensions of volume flow rate of a fluid are
		(A) $[LT^{-1}]$ (B) $[L^{2}T^{-2}]$ (C) $[L^{3}T^{-1}]$ (D) $[L^{3}T^{-2}]$
	10	Time taken by light to travel from sun to earth is
		(A) 8 min 20 s (B) 1 min 20 s (C) 5 h 20 s (D) 4 h 20 s
	11	At what angle Dot product and Cross product have the same magnitude
		(A) 0° (B) 45° (C) 30° (D) 60°
	12	Magnitude of cross product of two perpendicular vectors is
		(A) $\vec{A}\vec{B}$ (B) $\vec{A}\vec{B}$ în (C) 0 (D) $\vec{A}\vec{B}$
	13	A 1500 kg has its velocity reduced from 20 ms ⁻¹ to 15 ms ⁻¹ in 3.0 sec. How large was
	13	the retarding force?
		(A) 500 N (B) 2500 N (C) 1500 N (D) 1000 N
	14	When a massive body of mass m_1 collides with lighter stationary body of mass m_2 , the
	17	velocity of massive body after collision will be
		(A) $V'_1 = 2V_1$ (B) $V'_2 = V_1$ (C) $V'_1 = V_1$ (D) $V'_2 = 2V_2$
	15	Which one of the following is conservative force
	10	(A) Electric force (B) Air resistance (C) Frictional force (D) Tension in string
	, ,	A hoop is rolled down on an inclined plane having height of 10 m. Its velocity at the bottom will be
	16	
	17	Apparent weight of an object in a lift moving down with acceleration $a = g$ is
		(A) $T = w + ma$ (B) $T = 0$ (C) $T = w$ (D) $T = Infinity$

GROUP: FIRST	SUBJECTIVE MARKS: 68	IOURD
	SECTION-I D4K-41-21	
QUESTION NO. 2 Writ	e short answers of any Eight (8) parts of the following	16
(1) Show that the ext	ression $Vf = Vi + at$ is dimensionally correct. Where Vi is the velocity at $t = 0$,	10
a is acceleration	and Vf is the velocity at time t	
(2) What are the rule	for assessment of uncertainty in case of a nower factor?	
(3) Three students me	easured the length of a needle with a scale on which minimum divisions is 1 mm	
and recorded as	(i) 0.2145 (ii) 0.21 m (iii) 0.214 m, which record is correct and why?	
(4) Write the dimensi	ons of (i) Force (ii) Velocity	
(5) The vector sum o	f three vectors give a zero resultant. What can be the orientation of the vectors?	
(6) Define torque, Wi	tite its unit (7) What is the unit vector in the direction of the vector $\vec{A} = 4\hat{i} + 3\hat{i}$	
(8) Does a moving of	lect have impulse ? (9) Explain the difference between elastic and inelastic collision	
(10) what is the effect	on the speed of a fighter plane chasing another when it open fire? What happen to the	
speed of pursued	plane when it returns the fire?	
(11) Define an Isolated	system, Give example	
(12) Two row boats mo	oving parallel in the same direction are pulled towards each other. Explain	
QUESTION NO. 3 Writi	e short answers of any Eight (8) parts of the following	16
(1) Explain what do	you understand the work done by Gravitational field?	
(2) An object has one	e joule of potential energy. Explain what does its mean?	
(3) When a rocket re	enters the atmosphere, it nose cone become very hot. Where does heat energy	
come from?		
(4) Define the terms	(a) Rotational Kinetic Energy (b) Orbital velocity	
(5) State the direction	n of the following vectors in simple situation; angular velocity and angular mom	entum
(6) Why does a diver	change his body positions before and after diving in the pool?	
(7) What should be the	ne length of a simple pendulum whose period is 1.0 second at a place	
where $g = 9.8 \text{ ms}$	-2 ?	
(8) Under what condi	tions does the addition of two simple harmonic motions produce a result,	
which is also sim	ple harmonic?	
	amon phenomena in which resonance plays important role	
(10) What features do	transverse periodic waves have common with longitudinal periodic waves?	
(11) What is the effect	of density on the speed of sound? Explain	
(12) What happen whe	en a jet plane like Concorde flies faster than the speed of sound?	
QUESTION NO. 4 Write	short answers of any Six (6) parts of the following	12
(1) Can visible light	produce interference fringes? Explain	12
(2) Explain whether	he Young's experiment is an experiment for studying interference or diffraction	
effect of light	being a emperament is an experiment for studying interference of difficultion	
	the Newton's ring is dark?	
(4) How convex lens	is used as a magnifier? What limits the magnification of an optical instrument?	ī.
(5) If a person was low	oking through a telescope at the full moon, how would the appearance of the	
moon he changed	by covering half of the objective lens?	
(6) Specific heat of a	gas at constant pressure is greater than specific heat at constant volume. Why?	
(7) What is meant by	irreversible process? Give its example	
(8) Calculate the worl	k done during isothermal process?	
(9) Draw PV-diagram	which show four steps of Carnot engine	
() Diaw I V-diagram		
Note: Attempt any Three	SECTION-II e questions from this section 8 x 3	= 24
O.5 (A) What is projectile n	notion? Derive expressions for its height and range?	- 24
(B) Find the projection	of $\vec{A} = 2\hat{\imath} - 8\hat{\jmath} + \hat{k}$ in the direction of the vector $\vec{B} = 3\hat{\imath} - 4\hat{\jmath} - 12\hat{k}$	2
O.6 (A) What is the effect of	of $A = 2t - 6j + k$ in the direction of the vector $B = 3t - 4j - 12k$ if temperature on speed of sound? Show that $v_t = v_0 + 0.61$ t	3 5
(B) How large a force is	is required to accelerate an electron (m = 9.1×10^{-31} kg) from rest to a	3
speed of 2×10 ⁷ ms	through a distance of 10 cm.	3
O.7 (A) Derive Bernoulli's	equation for a non-viscous, incompressible fluid which flows in a steady state manner	5
(B) A 1000 kg car trave	eling with a speed of 144 km h ⁻¹ rounds a curve of radius 100 m. Find the necessary	3
centripetal force	James and Househall and the Control of American And Inc. 11000000019	3
	ervation of energy in SHM in mass spring system	5
(B) Estimate the average	e speed of Nitrogen molecules in air under standard conditions of pressure and temperat	
Q.9 (A) Define diffraction o	f light. Describe it through a diffraction grating to derive diffraction equation to	
determine waveleng	eth of light.	5
	escope having magnifying power 5.0 consists of two thin lenses 24 cm apart.	
Find focal lengths of	f the lenses	3

PAPER CODE - 6478

11th CLASS - 12021

PHYSICS GROUP: SECOND DGK-52-21

TIME: 20 MINUTES

MARKS: 17

NOTE: You have four choices for each objective type question as A, B, C and D. The choice which you think is correct, fill that circle in front of that question number. Use marker or pen to fill the circles. Cutting or filling two or more circles will result in zero mark in that question.

QUESTION NO. 1

1	When droplet of water has terminal velocity the acceleration is
	(A) Maximum (B) Minimum (C) Zero (D) Constant
2	If the mass of the bob of a pendulum is doubled then its time period is
	(A) Halved (B) Doubled (C) Four times (D) Unchanged
3	Speed of sound in lead at 20 °C is
	(A) 1320 m/s (B) 1330 m/s (C) 1340 m/s (D) 1350 m/s
4	It becomes difficult to recognize the beats when the difference between the frequencies of two sounds
	more than about
	(A) 8 Hz (B) 10 Hz (C) 12 Hz (D) 6 Hz
5	In Michelson interferometer by moving the mirror through a distance of $\lambda/4$, the path difference
	changed by
	(A) $\lambda/4$ (B) $\lambda/2$ (C) $\frac{3}{4}\lambda$ (D) λ
6	The unit of magnifying power of a lens are
	(A) Watt (B) Joule (C) No unit (D) N-m
7	The value of Bolteman constant k is
	(A) $1.38 \times 10^{-23} \text{ J K}^{-1}$ (B) $1.38 \times 10^{-25} \text{ J K}^{-1}$ (C) $1.38 \times 10^{-27} \text{ J K}^{-1}$ (D) $1.38 \times 10^{-29} \text{ J K}^{-1}$
8	If one mole of an ideal gas is heated at constant volume then
	(A) $Qp = Cv \Delta T$ (B) $W = Cv \Delta T$ (C) $Qv = Cp \Delta T$ (D) $\Delta U = Cv \Delta T$
9	In order to reduce the uncertainty in finding time period of a vibrating body, it is advised to count
	(A) Small number of swings (B) Large number of swings (C) Infinite number of swings
	(D) Both A and C
10	The dimensions of Einstein equation are $E = mc^2$
	(A) $[MLT^2]$ (B) $[ML^{-1}T^2]$ (C) $[ML^2T^{-2}]$ (D) $[ML^{-2}T^2]$
11	The magnitude of a vector $\vec{\gamma} = 3\hat{\imath} + 6\hat{\jmath} + 2\hat{k}$
	(A) 3 (B) 6 (C) 7 (D) 8
12	When line of action of applied force passes through the axis of rotation, then the torque is
	(A) Zero (B) 1 (C) Maximum (D) Minimum
13	If a force of 20 N acts on a body for 5 seconds then the change in momentum will be
	(A) 5 NS (B) 20 NS (C) 50 NS (D) 100 NS
14	A typical rocket eject the burn gases at speed of over
	(A) 400 m/s (B) 4000 m/s (C) 8000 m/s (D) 10,000 m/s
15	Which one the following is non-conservative force
	(A) Gravitational force (B) Electric force (C) Elastic spring force (D) Frictional force
16	One radian is equal to
_	(A) 57.2° (B) \$7.3° (C) 57.4° (D) 57.7°
17	The moment of inertia of solid disc or cylinder is
	(A) mr^2 (B) $\frac{1}{2} mr^2$ (C) $\frac{1}{4} mr^2$ (D) $\frac{1}{2} m^2 r$

SECTION-I

DGK-G2-21

TIME: 2.40 HOURS

MARKS: 68

16 QUESTION NO. 2 Write short answers of any Eight (8) parts of the following (1) Three students measured the length of a needle with a scale on which minimum divisions is 1 mm and recorded as (i) 0.2145 m (ii) 0.21 m (iii) 0.214 m. which record is correct and why? (2) Find the dimensions and hence, the SI units of co-efficient of viscosity η in the Stoke's law $F = 6 \pi \eta$ rv (3) Check the correctness of the relation $V = \sqrt{\frac{F \times I}{m}}$ dimensionally (4) Write the dimensions of (i) Force (ii) Acceleration (5) Define the terms (i) Unit vector (ii) Position vector (6) Suppose the sides of a closed polygon represent vector arranged head to tail. What is the sum of these vectors? (7) What is the vector product of two vectors, give its two characteristics (8) Define projectile motion. Derive an expression for the time of flight (9) At what point or points in its path does a projectile have its minimum speed, its maximum speed? (10) Define impulse and show how it is related to linear momentum (11) Find the velocities of two elastically colliding bodies when $m_1 = m_2$ after collision (12) Explain the difference between laminar flow and turbulent flow QUESTION NO. 3 Write short answers of any Eight (8) parts of the following 16 (1) How can you find the work done by variable force by graphical method? (2) What will be the velocity of the particle if its momentum and kinetic energy are equal in magnitudes? (3) When a rocket re-enters the atmosphere, its nose cone becomes very hot. Where does this heat energy come from? (4) Prove that $a_t = r \propto$ (5) What is meant by angular momentum? Explain the law of conservation of angular momentum (6) When mud flies off the tyre of a moving bicycle, in what direction does it fly? Explain (7) What is the distance travelled by an object moving with simple harmonic motion in a time equal to its period, if its amplitude is A? (8) Does the acceleration of a simple harmonic oscillator remain constant during its motion? Is acceleration ever zero? Explain (9) If equation for simple harmonic motion is $x = 10 \sin \left(\frac{\pi}{6}\right)t$, then calculate the instantaneous displacement after 3 seconds (10) Explain why sound travels faster in warm air than in cold air (11) Write the characteristics of stationary waves (12) Explain the terms node and anti-node 12 QUESTION NO. 4 Write short answers of any Six (6) parts of the following (1) Can the mechanical energy be converted completely into heat energy? If so give an example (2) Specific heat of a gas at constant pressure is greater than specific heat at constant volume. Why? (3) Derive Boyle's law using kinetic theory of gases (4) A system absorbs 100 J heat at absolute temperature of 300 k. Calculate the change in entropy (5) If the magnifying glass has magnifying power 6 then find the focal length of convex lens (6) Explain the difference between angular magnification and resolving power of an optical instrument. What limits the magnification of an optical instrument? (7) If 5000 lines/cm are ruled on a diffraction grating then find its grating element. (8) Under what conditions two or more sources of light behave as coherent sources? (9) How would you manage to get more orders of spectra using a diffraction grating? **SECTION-II** $8 \times 3 = 24$ Attempt any Three questions from this section Q.5 (A) Define projectile motion. If a projectile is fired in a direction angle θ with the horizontal by velocity Vi then find the relations for (i) time of flight (ii) range of projectile 1+2+2 (B) The magnitude of dot and cross product of two vectors are $6\sqrt{3}$ and 6 respectively. Find the angle 3 between the vectors Q.6 (A) Derive the relation for absolute potential energy to lift a body from certain position to infinity 5 (B) An organ pipe has a length of 50 cm. Find the frequency of its fundamental note and next harmonic when 3 it is open at both ends Q.7 (A) Define rotational kinetic energy, derive it's relation. Also derive it for a disc and hoop 5 (B) How large must be a heating duct if air moving at 3.0 m/s along, it can replenish the air in the room of 3 300 m³ volume every 15 min. Assume air's density remains constant Q.8 (A) What is Carnot engine? Discuss Carnot cycle. Also derive the relation for its % efficiency 5 (B) A block of mass 4.0 kg is dropped from a height of 0.80 m on to a spring of spring constant $k = 1960 \text{ Nm}^{-1}$ 3 Find the maximum distance through which the spring will be compressed Q.9 (A) How compound microscope is formed? Derive an expression for its total magnification 2 + 3(B) In a double slit experiment the second order maximum occurs at $\theta = 0.25^{\circ}$, the wave length is 650 nm. 3 Determine slit separation
